User survey questionnaire

Question	Answer
Major	Medical Imaging Radiology Department
Duration of employment	2022—
The ease of software deployment	I don't think it's very difficult, but it's relatively troublesome. At the beginning, I couldn't understand it. My colleagues and I studied for a while before we realized that we need to upload files through OWA to use them properly.
Software Experience	Due to the lack of widespread use of software for predicting cancer, I found it novel and magical when I first came into contact with it. After using it several times, I was even more deeply shocked. Human intelligence can create software for predicting diseases and even saving lives. I am looking forward to its popularization to help more people.
Suggestions	After uploading the file and making predictions, users need to manually add the results to the patient's diagnosis conclusion section, which is a bit time-consuming. We hope to add the function of automatically saving the test results to patient information, which is more time-saving and efficient.
